NECON PRODUCT NEWS DISINFECTION PORTAL

Dear Sir or Madam,

It is with great pleasure that we present hereby our NECON disinfection portal:

A disinfection based on copper and silver ions which, in the given concentration, has a 100% biocidal, fungicidal, sporicidal, and myco-bactericidal capacity, as well as against enveloped and non-enveloped viruses. Related analyses and certificates by accredited laboratories may be requested at any time.

The finely atomized aerosols produce a protective effect which has a germ and bacteria reducing effect on the skin surface as well as on the clothing.

This is a highly effective protective method which has an efficient effect not only on humans but also on animals and technical equipment.

Its advantage is achievement of a long-lasting effect due to the aerosol formation and the inherent highly concentrated Cu/Ag compound. And all this without any chemical-bound additives, so that it is very well acceptable even for infants.

Colloidal ions are freshly produced in the connected treatment cells (a NECON product that has been used successfully for decades in various applications worldwide), so that only a stationary water supply is required. Water may also be supplied from a water tank.

The product is absolutely environmentally friendly, there are no environmental incompatibilities and there is no waste water or pollutant disposal involved.

With Best Regards,

Prof. Dr.h.c. Klaus Gebhardt,
President and Founder NECON GmbH
