

Volcanix® Natural Soil Improvers

Effective Soil Protection Is Our Goal

50% less fertilization costs
30% more yields
50% less fertilization costs

**Plant Nutrition
EXPERT**

www.volcanix.eu

What is your plan for the future?

Now it is our TIME TO CHANGE

Our Plan is to offer you better life. We dream about the food which is not only chemical product, we dream about the food which is natural product from our Earth.

Now the dream is coming true.

Our laboratory developed the technology of producing natural soil improvers.

Civilization destroyed our lands year by year and now its deserve to rebuild it in the natural way.

100%Natural & 100% Efficiency.

The main advantages of Volcanix® products:

- Volcanix® products causes excellent growth effects in both organic and traditional crops. Significantly activates biological life, causes high and healthy yielding even on weak and degraded soil.
- It rebuilds the natural immunity of plants to stress and pathogenic factors as well restores the microbiological balance.
- Minerals from our product remineralize the soil substrate and are not harmful to the environment.
- Volcanix® improves the flavor of fruit and vegetables and adds vigor and intensity of color to the plants.
- At a time when chemistry is everywhere around us the moment has come to think about the future of our planet and the condition of its soils.

Volcanix® Humic Active Coctail

HUMIC ACTIVE UNIVERSAL ORGANIC SOIL IMPROVER

Volcanix® Humic Active Coctail contains:

- Humic (TAP® - SAH - Stable Active Humus): 55% humic acids including:
 - 49% humin acids;
 - 1% fulvic acids;
 - 5% humins and ulmins;
- Dejecta of worms (vermicompost);
- Clay minerals, nutrients: nitrogen, phosphorus, potassium and other macro-, micro-and ultra-microelements, colloidal silica, capillary water, soil proteins, growth substances (vitamins, auxins and organic acids), cellulose, polysaccharides, vegetable fats and lignins.

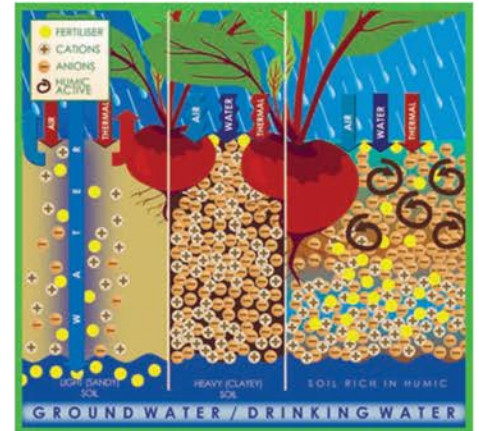

Main advantages:

- Regulates the concentration of nutrients (macro- and microelements) and increase the availability and uptake of them;
- Regulates and stabilize the pH of the soil;
- Significantly reduces leaching of fertilizers as much as 70%;
- Increases water holding capacity of soils, up to 5 times;
- Improves the structure of soils, thus improving water-air relations;
- Neutralizes heavy metals, toxins and salts in the soil;

Benefits

- Increases the number and amounts of minerals and vitamins in plants;
- Accelerates the growth of plant shoots and the root system;
- Significantly improves the quality of the crop and its nutritional value, appearance and taste;
- Reduces soil salinity;
- Does not pollute the soil environment or groundwater;
- Reduces the risk of lifestyle diseases.

Dosing and Storage:

- Storage in shaded place in temperature not lower than 5°C and not higher than 30°C
- Apply in temperatures above 5°C. It can be applied after germination of plants.

Supplementary information:

- Do not mix with plant pesticides, mineral manures or other products of chemical synthesis.
- NO the grace period.

**Support Crops
with Humic Active Coctail**

Volcanix® Humic Pro NPK

*Effective feeding and innovative protection
Feeds plants and the soil*

Volcanix® HUMIC PRO NPK provides effective plants and soil feeding and innovative protection thanks to:

- 80% organic substances (includes 50% Humic Acids);
- NPK > 20%;
- Natural amino acids;
- Substances and enzymes that stimulate growth.

Main advantages:

- High content of macro and microelements;
- High efficiency of the use of particular elements by plants;
- Full chelation of microelement elements ensures their high uptake and use by plants;
- Protective properties - hampering and inhibiting the development of pathogens;
- Easy to use.

Benefits:

- Builds a strong plant root system and plant resistance to stress conditions;
- Significantly improves the quality of the crop and its nutritional value, appearance and taste;
- Does not pollute the soil environment or groundwater;
- Reduces the risk of lifestyle diseases.

Application and storage

250l of water + 5l of Volcanix® Humic Pro NPK = 255l/ha

Volcanix® HUMIC PRO NPK can be used several times during the growing season. The concentration and frequency of treatments depends on soil fertility, nutrient deficiency and the condition of plants.

Stored in an origin package, at a temperature not lower than 5°C and not higher than 40°C in a place inaccessible to children, protect from the sun.

Supplementary information:

- The optimal conditions for foliar nutrition are: high humidity and temperature within 10-30°C. On sunny days, spraying should be done early in the morning or late in the evening.
- NO combined with plant protection products, mineral fertilizers and other chemical synthesis products.

**Rich Composition
Ensures a Healthy Harvest**

Volcanix® Humic Harvest NPK

Description:

VOLCANIX® HUMIC HARVEST NPK is a highly effective organic, mineral and granulated agent improving soil condition. It contains concentrated humic acids as well as macro and microelements in the form that restricts their elution effectively. The nutritional components included in VOLCANIX® HUMIC HARVEST NPK are easily absorbed by plants. The systematic use of VOLCANIX® HUMIC HARVEST NPK along with the appropriate utilization of the organic remains left after the crops allow us to limit the mineral fertilization even by 50%. A kilo of VOLCANIX® HUMIC HARVEST NPK in action will replace effectively a ton of manure.

- NPK - 3-0-1
- Organic matter 55%

Main advantages:

Improves the soil structure;

- Increases the sorbent abilities of soil even by 12 times;
- Allows to reduce the mineral fertilization even by 50%;
- Significantly increases the water capacity of soil by which plants are protected in brief periods of water shortage;
- Contains macro and microelements in the form that effectively restricts their elution and retarding;
- Activates the development of native and positive bacterial microflora;
- Brings back the natural richness of soil enhancing the content of humus and cumulating nutritional components and water;
- Has a beneficial effect on the development of root system and the condition of plants;

Benefits:

- Fertilizes soil;
- Has a quick and long-term action;
- Activates the development of native and positive bacterial microflora;
- Increases harvesting and boosts the profitability of the agricultural production.

Application and storage:

→ Grains	60 kg/ha
→ Bulb and root plant	100 kg/ha
→ Vegetables	80 kg/ha
→ Strawberry	80 kg/ha
→ Maize	80 kg/ha
→ Currant/Raspberry	100 kg/ha
→ Fruit Trees	100 kg/ha

Stored in an origin package, under cover, should be protected from dampening or moistening.

Your Grass and Turf Need Nutrition Power

Volcanix® Natural Mineralizing Soil Improver

Description:

VOLCANIX® Mineralizing Soil Improver is made on the basis of volcanic lava and other full of minerals rocks so delivers: silica, magnesium, manganese, iron, potassium, calcium, titanium to the soil.

Main advantages:

Improves the soil structure;

- High storage capacity of water, warmth and nutrients;
- Promotes life in the soil;
- Improves soil structure;
- Neutralizes heavy metals and salts in the soil;
- Stays in the soil for a long time and are leached out by the groundwater and the contained minerals are released gradually and therefore they have a long-term influence on the soil.

Benefits:

- Result in better rooting of plants;
- Quick and healthy growth of plants and saplings in plant nurseries;
- Perfect flavor of fruit and vegetables, vigor and intensity of color of plant;
- Extend the growing season by delaying the penetration of cold and frost;
- Assure good drainage and prevent inundations.

Dosing and Storage:

Application for the best results: from 500kg/ha to 2000kg/ha - strictly depends on the soil condition

The details please find on www.volcanix.eu

Stored in an origin package that is under cover so that it can be protected from moistening.

There is no possibility of over-fertilization nor expiration of the product.
